

AUTOMATE YOUR WARRANTY TRACKING IN SERVICETITAN

Empowering Contractors with Seamless Data for AI-Powered Warranty Processing

We're contractors first and ServiceTitan experts second. But here's the thing: JB Warranty's integration is only as good as the data feeding it. When contractors run ServiceTitan half-baked — missing config, sloppy data, manual workarounds — your AI can't do its job. Warranty agreements don't sync clean. Claims processing gets stuck. Nobody wins.

NIFT: The Foundation for Your AI

NIFT gets contractors dialed in: clean job data, configured workflows, proper integrations. When the data is solid, your AI works the way it's supposed to. Warranty agreements track right. Claims process fast. No friction. That's what we do: get contractors' data ready for AI.
